

5. (New) Valve battery cartridge used for mixing cold water and warm water, comprises two discs (5,6) arranged one above the other to form a plane sealing together, wherein the lower disc (6) is a stationary inlet disc and the upper disc (5) is a control disc which is displaceable and rotatable on the inlet disc; where the control disc (5) is in mechanical connection with a driving arm (1) pivoted in a lever holder (2) through a ceramic moving element (4), the lever holder (2) is rotatably arranged in a cartridge casing (3), the base (9) of the cartridge casing (3) is formed with a connection element (14) for recovery at least one insertion piece (10), wherein an opening for receiving the insertion piece is the connection element in formed in a direction which is substantially parallel with a longitudinally axis of the cartridge, the movement comprising the connection element (14) in the base (9) of the cartridge casing (3) for receiving the insertion piece (10) enables connection between connection ducts (13) in a valve battery body (12) and inlet openings in the base (9) and the base (9) is provided with seals means (11) insulating the connection element from an inner space of the valve battery body (12).
